

# Allergy Treatment

If your body is a computer, then muscle testing is like the keyboard that helps us access all available information. The good news is that muscle testing helps us to find weak circuits before they become broken circuits. That helps us return them to “strong” circuits.

## How does all this relate to allergies?

Some patients tell us that they are aware of having an allergy. Others tell us they suspect they have an allergy. Still others tell us they seem to always get a headache when they eat bread but can't imagine how those two actions can be connected.

*“When I first came to Dr. Gorman’s office, I was extremely allergic to strawberries. I couldn’t even touch them without serious consequences. After Dr. Gorman desensitized me to strawberries, I can now eat as many as I want whenever I want!”*

– Beth Carroll, Yardley, PA

In any event, we combine techniques from our Chiropractic training with acupuncture and muscle testing to discover “sensitivities.” We use the word “sensitivities” because you usually develop an allergy gradually—it begins as a sensitivity. You may not even be aware that you have become “sensitive” to something. We use a totally non-invasive (no scratch tests or blood tests) method to measure your sensitivity to certain foods, chemicals, heavy metals, and allergens.

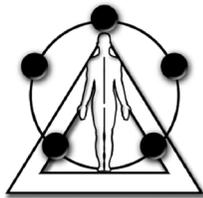

**Goods news** — we have a totally non-invasive treatment for your allergies and sensitivities. There are no shots or medications in our treatment. We actually “de-sensitize” you to those substances. If you were allergic to eating shellfish, you are now able to eat shellfish without thinking about it.

*“I met Dr. Gorman at one of his lectures. At the time, I was using allergy medication and an anti-depressant and was trying to stop. I had tried on my own and was unsuccessful. Dr. Gorman said he thought he could help me - and he has! I am free of all medications and feeling great! Dr. Gorman helps me with everything from sports training to nutrition, and much more. I see Dr. Gorman about every three weeks and will do so for the rest of my life.”*

– Joni Payne, Glenolden, PA

## Is it that simple?

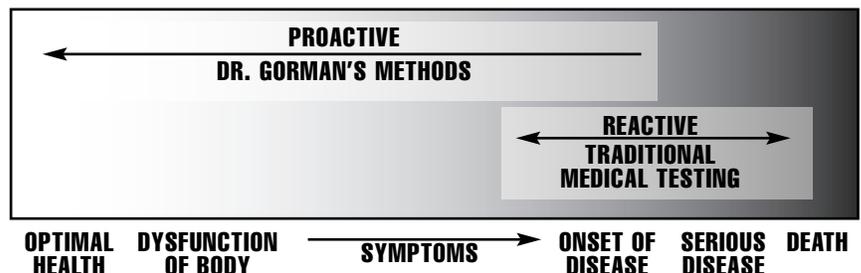

Yes it is. We have a non-invasive treatment that desensitizes you to substances that previously aroused a reaction in your body. In fact, we regularly demonstrate this technique at our lectures—if you would like to see a demonstration, we invite you to the next lecture titled “**Optimal Health 101.**”

**GORMAN**
