

Detoxify Yourself!

We are privileged to live in this place at this time! There are so many advances in health and science, and so many opportunities to make a difference in your health!

Yet, along with all the positives, there are also lots of toxins out there that cause us to live in less than optimal health. As part of our practice, we offer the EB-PRO detoxification foot bath to help you remove toxins from your body.

I had severely sprained my ankle and the swelling wasn't reducing at all after 3 weeks of traditional medical support through an orthopedic surgeon. I couldn't even see my toes! I went to see Dr. Gorman who correctly identified that toxins were impeding my progress. After only 2 treatments with the EB-PRO, the swelling started to go down! Dr. Gorman helped me get 'back on my feet' within a couple of weeks and I was able to go to Paris for my 20th wedding anniversary and walk all over the city! It was truly a miracle!
— Deb Myatt, Warminster, PA

Why is detoxification so important?

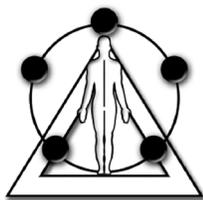

The “foot bath” is totally non-invasive and takes a half-hour. During that time you will sit with your feet in a basin of water. We will give you some nutritional supplements to enhance the detoxifying outcome.

How does it work?

Our bodies operate on electric impulses. The foot bath will create an electromagnetic ionic field and send an electromagnetic impulse gently up and down your body so that it will help to “rebalance” areas of impurity or toxicity. This helps your body eliminate trapped toxins and eliminate them through your liver or kidneys. For most patients, the color of the water will change—please note that this is not indicative of any serious illness or health issue. Research has shown that there is no correlation between the water color and the health of any individual.

When combined with other treatments in our practice, we have found that the foot bath helps patients recover their health more quickly and more thoroughly. We usually recommend occasional follow-up foot baths as a health maintenance technique.

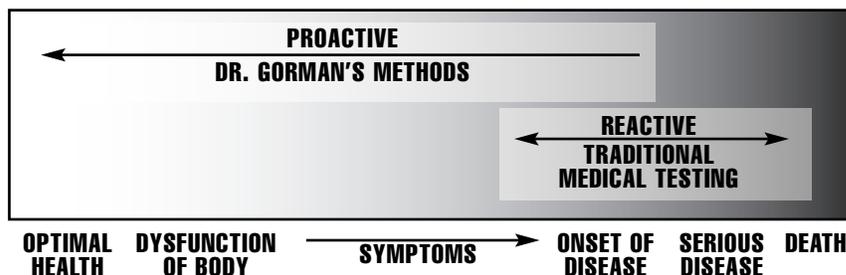

The EB-PRO detoxification foot bath is the only one that is FDA approved for such treatments. So it has the proven track record of safety and effectiveness. If you would like to see a demonstration, or even experience it, come to the next lecture titled: “**Optimal Health 101.**”
